

The vCAM mini is an easy-to-use system that fits easily into a CCTV or Plumber truck. The vCAM mini is ideal for the Plumber just entering into the CCTV inspection market or anyone who just needs to inspect small diameter pipes up to 100' in length. The 1" camera head navigates its way around 90-degree bends and travels through "P" traps with ease. The ultra-bright LED's illuminate the inside of the pipe to make inspection clear and precise. With the built-in sonde transmitter, the camera-head's position and depth can be found from the surface using any Pipe locator with a 512 or 640Hz mode.

Features and Specifications

- 100 ft (60m) cable
- Sonde - 512hz/640Hz – can be switched on control panel
